Details and experience hands-on-work

Designer and Front-end Developer with a strong desire to learn and improve. In the last 2 years, my career has been focused on ideating, designing and developing strong, easy-to-navigate, functional and accessible web experiences to help companies achieve their business goals.

Managed by Project Managers and Brand Strategists and in collaboration with many talented Designers, Developers and Directors, I'm delivering my tasks before the requested deadlines with a pixel-perfect quality, without omitting or sacrificing the smallest details that Designers provided.

Strenghts during Development and Design

Accessible and Semantic HTML markup

Using a consistent, SEO-accessible and clear markup while writing HTML code. I aim to build high-scoring sites in terms of accessibility, performance, usability and clear disposition of the elements.

Consistency, re-usability and commented code

Building components to re-use across many pages, omitting or putting together duplicated code in order for it to be easy to update and to maintain. The code I write is always commented, concise, clear and structured, and helps other Developers put hands on the code knowing exactly what they are working on.

Extreme attention to details, speed and precise communication

Focusing on the product I'm building without omitting any details and small precautions provided by Designers and colleagues. Delivering my tasks within the deadlines and in constant contact with Project Managers and stakeholders, providing fully detailed updated and progress of the projects at every stage of the build.
